I Ride With The Soil Conservationist

## Soil Conservation Service Has Full Daily Schedule

By Jack Owen

**Editor's Note: This is the third in a series of articles dealing with Lancaster County businesses related to agriculture. The writer will spend a day riding with personnel who serve the farmer but who do not actively engage in the business of farming. The articles are an attempt to bring the farmer a report of the job of service personnel before they reach the farm. Other articles will be printed in the following weeks.**

This winter has been one of the roughest I can ever remember in our work Martin Muth told me, and that goes back a long way

Muth began work with the Soil Conservation Service of the U S Department of Agriculture in August of 1935 when the work began in the county with a project on the west branch of the Octoiara Creek

There have been a lot of changes in the 28 years said Muth, who is now Work Unit Conservationist in charge of the Lancaster County office In the early days farmers were afraid to sign up because they thought the government would take their farms away from them

We have learned a lot about conservation practices which make them more practical for a farmer to work In the early days some of the crop strips were pretty crooked because we stuck to the contour no matter how the rows came out Some of the early terraces were steep banks that were nearly impossible to farm over, and we used a lot of rock dams and spillways in gullies that we would now control with other means.

(Continued on Page 6)

## 2 Agreements igned In 1962 By SCD Directors

Ninety two new cooperating rmers in 29 of the county's township's signed agreeents with the Lancaster unty Soil Conservation Disict last year Henry E Giv-r, secretary of the district s listed them below by townips, acres and number of rms.

Congratulations
4-H'ers!
We're glad to join in celebrating National 4-H Club Week. We proudly salute 4-H'ers, and the local leaders who give freely of their time and talents.

## SCS Lists Year's Activity

The Soil Conservation Service, United States Department of Agriculture assisted the Lancaster County Soil Conservation District during the past year in holding farmer meetings, the plowing contest, Conservation Field Day and many other projects.

The Soil Conservation Service staff consists of — W Martin Muth, Work Unit Conservationist, Abner Houseknecht, Soil Conservation Technician, Richard Shipman, Conservation Aide; Larry Corson, Soil Conservationist, Mrs. Mildred Jones, Clerk-stenographer.

Mr. Shipman and Mr Corson have joined our ranks in the past few months.

We provided 1160 services for conservation planning and application. 166 land-owners applied one or more practices We participated in twenty-four consultations on soil and water conservation measures and assisted 396 farmers in conservation work We received and serviced 73 requests received from the Agricultural Stabilization Conservation Service.

The following practices were established with our assistance on cooperating farms —

| | |
|---|---|
| Basic Farm Plans Prepared 50 farms | 9552 Acres |
| Conservation Cropping Systems | 1925 Acres |
| Contour Farming | 1980 Acres |
| Cover and Green Manure Crop | 1064 Acres |
| Crop Residue Use | 995 Acres |
| Diversions | 3355 Feet |
| Farm Ponds | 4 |
| Fish Pond Stocking | 8 |
| Cut Back Borders | 615 Feet |
| Grassed Waterways and Outlets | 1.8 Acres |
| Hayland Planting | 10 Acres |
| Land Clearing | 6 Acres |
| Mulching | 11 Acres |
| Obstruction Removal | 12 Acres |
| Pasture and Hayland Renovation | 14 Acres |
| Pasture Planting | 41 Acres |
| Pipeline for Livestock Water | 2095 Feet |
| Pond Sealing or Lining | 1 |
| Spring Development | 2 |
| Strip Cropping, Contour | 1934 Acres |
| Strip Cropping, Field | 20 Acres |
| Structures for Water Control | 2 |
| Field Drainage Ditch | 1300 Feet |
| Gradient Terraces | 2483 Feet |
| Tile Drains | 17809 Fett |
| Tile System Structures | 17 |
| Tree Planting | 7 Acres |
| Trough or Tank | 2 Acres |
| Wildlife Tabitat Preservation | 44 Acres |

## Soil Scientist Suggests Topdress Redcoat Wheat

Topdressing Redcoat wheat is a real paying proposition, James Eakin, extension Agronomist from the Pennsylvania State University, told nearly 200 county farmers Wednesday at the county Soils and Crop day

Eakin said Penn State researchers have spread up to 100 pounds of actual nitrogan per acre on Redcoat and could not cause it to lodge.

He said up to 50 pounds of actual nitrogen per acre on Redcoat would probably pay in yield, but over 60 pounds probably would not pay for the cost of the fertilizer

He suggested applying the fertilizer to stands as early as possible to get increases in yields Barley crops probably should not be top dressed because of the danger of lodging, he said

Various types of nitrogen fertilizer made no appreciable difference in yields, he said. The ammonia forms break down into the nitrate forms when the weather turns warm and the plant uses either from if applied early enough

Speaking of nitrogen on corn, Eakin said there is very little difference in yields when the fertilizer is drilled in, plowed down or disced in With the discing method, you get much healthier weeds, he cautioned

If a farmer must use a split boot corn planter, he cautioned against using more than 50 pounds of nitrogen or potash or germination will be slowed or stopped entirely With a side bander, he said, there is no worry. Penn State researchers have put on up to 900 pounds with no ill effects.

The meeting was sponsored by the county extension service

## Farm Calendar

r 4-9 — National 4-H Club week.
rch 4 — 1 30 p m — County vegetable growers meeting t Production Credit, Roseville Road.
6:30 p m. — County 4-H leaders banquet at Hostetters banquet hall, Mount Joy.
7:30 p m. — County fruit growers association reorganization meeting at Farm Bureau cooperatve building,

(Continued on Page 10)

## FIVE-DAY WEATHER FORECAST

**Temperatures during the next five days are expected to average three to seven degrees below the normal range of 28 at night to 46 in the afternoon. Little day to day change is predicted. Precipitation may total up to ½ inch (melted) occurring as snow early today, Sunday and late Monday. Snow or snow mixed with rain is expected again about Tuesday.**

# Market News Reports

## At Lancaster Yards

WEEKLY REVIEW

Friday, March 1

CATTLE: 2450 Compared with 1901 head last week. Supply includes 60 percent slaughter steers and 25 percent feeder steers. Trading slow. Compared with last weeks close, slaughter steers generally 50 lower with some sales 25-75 lower Cows 25-50 lower with most decline on Canner grade Bulls steady. Feeder steers weak.

Slaughter steers· Choice 900-1350 lbs 24 75-25 75, few loads and lots High Choice with end Prime 1050-1247 lbs 26 00-26 15. few head Choice 1035 lbs 26 75. Load 1413 lbs Choice 24 00, Good to low Choice 23 00-25 00, Standard 21 00-23 00

Heifers Few lots Good and Choice 800-919 lbs. 23 00-24 50.

# Broilers Gain Strength

Broilers gained some strength this week at the Lancaster Poultry Center as 114,200 head in 20 lots sold at prices ranging from 17.0 to 18.0 for a sale average of 17.36 The average of the previous week's sale was 16 93.

The top lot at the February 28 auction was 4,000 White Mountains at nine weeks, three days consigned by D. E. Horn and Co. (Richard Baker grower), and purchased by Carl B. Risser.

Three lots including 1,700 roasters brought 24 8 to 26 1, while 5,700 pullets in two lots sold for 21.8 and 21 9. A lot of 700 heavy fowl brought 21 0 and 5,200 leghorn fowl in two lots sold for 9.6.

Only 700 birds in two lots failed to sell. The complete sale offered 128,200 head in 30 lots and sold 127,500 head in 28 lots.

Following is the complete sale report with lot number, seller, grower in parenthesis, amount and breed, age in weeks and days, buyer and price.

# Prices Decline Under Pressure

Live broiler prices in Delmarva decreased slightly during the 24 hour period ending 10 30 Friday morning with only a fair demand for the moderate offerings.

Prices at farms ranged 16 2 to 17 6 for 981,300 head including 462,900 head sold at Thursday's auction at Selbyville, Del A total of 43 per cent of the sales were at 17 to 17 3.

Estimated slaughter for the week end was 724,000 head compared to the 566,000 head slaughtered by eastern shore processors last week end

Ready to cook demand was irreguar ranging from fair to good and being stimulated by future activity.

---

Keep a close watch on stored grain for signs of insect infestations. If weevils or other insects are present, fumigate now before cold weather. Use one of the commercial grain fumigants according to directions on the container.

---

The success of a war seems to be measured by the damage it does

# From Where We Stand . . .

## Conservation - What Does It Mean?

If you are ever looking for a topic for good, lively discussion, try this one. Just say, "If a man has $100 in his pocket, it doesn't do him, or anyone else, any good as long as he keeps it there."

We have hashed this over loud and long with a good friend of many years. His contention is that the money in the pocket is a form of security to the person who has it, and perhaps it is if the person can put his dependence in material things, but it still brings him nothing of tangible worth until he drags it out and spends it.

We believe conservation of our natural resources falls into a parallel with this example. Conservation does not mean simply saving what we have in the way of natural resources Rather, true conservation means the WISE USE of all the resources at our command

There are those among us who would like to see all our woodlands kept just as they are. If these people had their desires fulfilled, not another tree would ever feel the woodsman's axe; not another foot of sod would feel the plowman's blade, and not another stream would be used for hydro-electric power, or irrigation of crops or for municipal water supplies

SAVE what we have, they say.

Save it for what? we ask — for the next generation, for posterity, for our old age, for security?

In many other countries of the world — particularly in South America — there are thousands upon thousands of acres of forests and grassed plains with untrammeled streams which have been "saved" in much the same state they have been for thousands of years.

But living on these acres are thousands of people with barely enough to eat, and shelter which barely rates the name

Is this security?

We hate waste We were brought up to believe that you should finish the first apple right down to the core before you bit into another.

But isn't "saving for saving sake" a form of waste? Isn't it just as bad to let a tree stand until it dies naturally and falls into decay as it is to cut a tree before it is ripe for harvest? Isn't it far worse to let wildlife so overpopulate an area that there is wholesale starvation every year than to harvest a reasonable amount periodically?

And isn't it just another form of waste to let trees or grass stand on ground that could be used to better advantage for the production of food?

We have become so accustomed to thinking of waste as the over use of abuse of natural resources that we sometimes overlook the fact that lack of use is a form of waste too

We will not have accomplished the job of conservation until we have put every acre of our farmlands and forests to the best possible use for which it is suited

At least that's how it looks from where we stand.

## Don't Apologize

When speaking of published dairy records recently, a farmer said "Go easy on mentioning Butterfat."

He believes, and we suppose rightly so, that many people in our society today instinctively shy away from any food item that mentions fat in any form.

He believes that misinformation or lack of information has made many consumers wary of foods which might contain a few calories. He believes education is needed to help farmers market foods which suit the modern market.

We agree that education is needed, but we believe it is a mistake to apologize for the wholesomeness of any food product We believe it would be of far greater advantage to the health of the nation to educate the consumers to the value of good food than to try to alter food products to fit a fad.

We believe dairy farmers should quit apologizing for the richness of milk and plan a campaign of promotion and education on the value of whole milk with the richness left in.

We realize that much undesirable publicity will have to be combatted, but isn't that better, in the long run, than giving in to a fad which has no basis in scientific fact.

We have no quarrel with other methods for determining the value of milk. They are good, and probably should be added to the present method of grading milk, but let's not lose sight of the fact that butterfat is a wholesome, natural part of milk too.

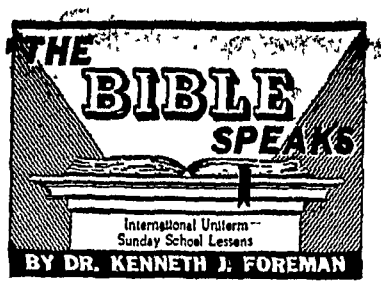
When we start apologizing for the goodness of food, we will begin producing food which is not good.

At least that's how it looks from where we stand.

★ ★ ★ ★

### Water-saving practices eased drouth

Northeast region farmers report "less damaging results," from severe drouth beginning last May, when they were using such moisture-saving practices as terracing and contour strip cropping. An upsurge of interest in farm pond construction led nationally known conservationist, Kent Leavitt, Dutchess county, N.Y, to speak a word of caution: "Ponds unprotected against erosion can lead to disappointment. Many are no longer of any value because they are silted up In our area, strip cropping, diversion ditches, and other appropriate measures making a farm-wide conservation program, are necessary to preserve upland areas and protect ponds against silting"



## Work and Worship

**Lesson for March 3, 1963**

**Bible Material: Mark 9.2-50**
**Devotional Reading: James 2:14-26.**

WORSHIP can be called words uttered to the glory of God. Work can be called actions for the glory of God. A sincere person like J. S. Bach, the great musician, can write music to the glory of God Men have written hymns and refused to seek a copyright on them; let them be used by anyone to the glory of God, they said. A mother, asked what she had done during the week to glorify God, could point to her children. Every act a mother does, no matter how trivial, which goes to the making of an upstanding citizen of church and state, is surely work done for the glory of God Which is a better way to serve him and bear witness to him, work or worship? In which way do we best glorify the Father of all?

Dr. Foreman

**Work is not worship**

That is a rather stupid question. It's like asking, when does a man love his wife the most, when he's sending her flowers or when he is working hard for her sake? There's no question when he feels most romantic—of course it's when he sends the flowers. But that's not the question· when does he love her the most? You can see it's not a sensible question, because he loves her all the time, but he shows it in different ways.

So work and worship both grow out of our love for God and desire to do His will. (We are talking about Christians, not people-in-general.) Yet, though so much alike at base, work and worship are not the same. There are people who seem to think either one can take the place of the other. There are men in monasteries who have taken a vow of silence, and never so much as speak to their own relatives any more. They do nothing all day and night but meditate and pray. On the other hand there are persons who feel that if they are sufficiently busy, God will (so to speak) excuse them from going to church. Some Christians starve themselves spiritually because they get too busy to read the Bible, too busy to have even two minutes of prayer a day. Nevertheless both these

**Jesus at worship and at work**

In this as in all ways, Jesus found the right balance. He was often so pressed for time and space that He hardly had room enough to move around. He was so busy at times that He could not find an hour for prayer all day. If any one could ever have said, *My work is so important*, and it is done so plainly to the glory of God, that the Lord will excuse me if I don't attend the synagogue and don't have a prayer time all week; if any one could ever have said that it was Jesus. But no, when His work grew heavy He would get up long before daylight and go off to the hills to pray alone. And on the Sabbath when He came out from the synagogue to find people in need waiting in line for Him to help them, He did not tell them this was His day for worship and communion with God. An old teacher in a Methodist school was known never to miss prayer-meeting. One day a student who hadn't prepared his lesson thought he had the perfect excuse. "I was at prayer-meeting last night, sir," he said. The professor retorted: "I've no use for any one who lets religion be an excuse for skipping work." Jesus might have said just that. Can you imagine a Jesus who never prayed? or can you imagine a Jesus who never did anything but pray? Neither would be the real Jesus!

**He needed both**

Worship and work were not "electives" in Jesus' life. They were not something to be taken or not, as your whim might be. Work and worship were necessities for Him Whatever else He needed them for, it was at least this: He needed prayer and work in order to be what He was. For whatever we do leaves its mark on us. There are bad marks, like the mark of Cain, and there are good marks, like the print of the nails in Jesus' hands. If Jesus' life would have been weak and empty without worship and work in abundance. how can we dare to try the dangerous experiment of neglecting those two great supports of the God-pleasing soul, the worship of God and work in His name?

(Based on outlines copyrighted by the Division of Christian Education, National Council of the Churches of Christ in the U. S. A. Released by, Community Press Service.)

# Now Is The Time . . .

**BY MAX SMITH**

MAX M. SMITH

**To Prevent Calf Pneumonia**

Many dairymen are plagued every winter by pneumonia in their small dairy calves This is often caused by damp, drafty conditions. Proper ventilation is very important in the dairy barn as well as the calf pens, if the fan exhaust system is used, the warm air from the barn should be pulled toward the calf pens rather than away from the calves Pens should be kept dry and well bedded at all times

**To Push Early Lambs**

Sheep producers are reminded of the very favorable prices for spring lambs at Easter-Time In order to get maximum returns these lambs should be fed grain daily in addition to the ewe's milk A creep-feeder including equal parts of cracked corn and whole oats will put on extra pounds Many well-fed young lambs at Easter will return as much per head as older lambs during the summer.

**To Consider Veal Calves**

With the abundance of milk on most markets and the favorable price of choice veal calves, it is the feeling that some of this milk could be used on the farm to feed out more veal calves and return a greater profit A Special Extension Circular on the subject is available

**To Plan For Fallout Protection**

Rural people should know the dangers they face in case of nuclear attack, few rural areas are likely to be hit by bombs, but all are subject to radioactive fallout Farmers are urged to become acquainted with this subject and make definite plans for the protection of their families and their live-

# Future Farmers Study Methods To Save Soil

As rural young people grow into maturity, the shadow that has fallen across mis-used land hovers above them also, reports Thomas M Malm area supervisor of Vocational Agriculture and Future Farmers in the York-Lancaster Area

Young people realize that the land which nourished them in their youth will no longer sustain them, they must go elsewhere Gone are the close ties of family, he said When families leave the foundations of the church, school and community are shaken

The Future Farmers of America do not want this to happen The 10 local chapters and their 14 vocational agriculture instructors do not want this to happen They and their instructors are exerting their efforts toward building a better farm life They believe in their motto

Learning to Do
Doing to Learn
Earning to Live
Living to Serve

They are learning to do through the use of visual aids, contests, field trips and lectures which are a part of their course of studies They are willing to assist as shown by past deeds in helping erect road sign, helping set up watershed meeting preparing speeches on Conservation and above all trying to convince Dad and the neighbors that practicing Conservation is part of good farm management

## INCREASE YOUR INCOME with

**Mr. Poultryman, are you getting ready for profitable commercial operation in the years ahead?**

As you know, some farmers are expanding flocks for more income; streamlining equipment and housing for peak of performance.
If you are thinking along these lines, ask us about the Purina high density plan. It's a plan worked out by Purina engineers, Purina Research Farm specialists, and by field experience. It answers questions you will want to know about bird density, housing, insulation, controlled environment, egg handling.
Drop by our store today, and prove to yourself . . . Purina service helps you increase your income.

**Science is working hard in Purina's modern laboratories**

Science is working hard for you at Purina's modern, new laboratories, Checkerboard Square, St. Louis. Each month, some 25,000 quality-control tests are run on hundreds of ingredients and chemicals used in today's complex feed formulas. Exacting and time-consuming, yes . . . but such work by Purina's dedicated team of scientists is one of the underlying reasons why Purina has led the way in better feeding methods for 68 years.

Purina doesn't believe in experimenting with you, the customer. That's why its laboratory facilities were recently doubled in size . . . to better assure you of top-quality ingredients and precision-formulated Chows worthy of the Checkerboard trademark. This modern laboratory is evidence, too, of Purina's desire to keep abreast of the very latest in animal nutrition . . . to help you produce more meat, milk, eggs and wool more efficiently.

**GET RID OF LICE ON YOUR HOGS**

u can go after lice and fleas, help prevent the spread sarcoptic mange anytime with Purina Hog and Cattle sting Powder. There's no need to worry about spray- your hogs in cold weather. Just rub Hog and Cattle sting Powder into the hair coat of each hog and scat- it in the bedding.

ve got Hog and Cattle Dusting Powder in sturdy, 20- fiber pails at our Checkerboard Store. Pick one up . And be sure to ask us for your free G-4 Insecticide ter that comes with each pail you buy!

To stop lice and fleas, dust your hogs with Purina Hog and Cattle Dusting Powder. It's finely ground — gets down next to the skin where it does the most good.

# FHA Loans Aid Farmers In Saving Soil

**Richard W. Hoover**
**County Supervisor**

Farmers Home Administration ending in 1962 reached the highest level for any 12 month period in local history A total of $522,000 was loaned to area farmers by the Local FHA Office located at Lancaster Purpose for which loan funds were used included loans to reorganize farms with new equipment, better livestock and other operating needs; to buy, develop, enlarge farms and to refinance debts; to build or improve houses and service buildings on farms and on non-farm tracts in rural communities; and loans for land development and conservation practices to preserve and maintain soils and improve net farm incomes.

In 1962 local farm families repaid nearly $320,000 in principal and interest on loans The good repayment record by farm families using Farmers Home Administration credit points out that with adequate credit plus technical advice and the use of good farm practices, family farmers can operate successfully under modern agricultural conditions One of the most important practices is the adoption of soil and water conservation plans on farms

The Agriculture Acts of 1961 and 1962 added a number of new loan authorizations to the Farmers Home Administration program objectives

Loan authorities were broadened to include the financing of recreational enterprises designed to help supplement family farmers' incomes Also small towns and associations of farmers and other rural residents now may borrow funds to finance changes in land use, including development of recreational facilities

Housing acts now permit loans to rural residents to construct homes and to senior citizens to buy, build or renovate housing for themselves as well as loans to individuals, corporations and groups to build rental housing for the elderly in rural areas

# Farm Credit Available For Conservation

Lancaster Production Credit and Federal Land Bank Associations is owned by and serving Farmers of our community with a dependable and convenient, source of credit for Farm Real Estate, Farm and Home Improvements, Crop and Livestock Production Costs at reasonable costs to enable the farmer to conduct an efficient and a sound soils program.

Essential to a profitable farm operation is good management. This requires good financial planning, good seed, good livestock, reviewing and previewing market conditions and a sound soils program

Primary to a sound soils program is the employment of conservation practices recommended for a particular farm by your local S C D These practices maintain a high level of production and considerably reduce the cost of production by making it possible to get maximum results from labor, seed and fertilizer. Loans for S C D practices are readily available

During 1962 Production Credit Loans outstanding amounted to $4,308,616 00 and Federal Land Bank Mortgage Loans $6,109,289 00

# Game Protector List Activities

The following is an accomplishment report by the Game Commission showing work completed in Lancaster County during the past year. On the four Farm Game Projects we have 294 Cooperating Farmers. These farms comprise a total of 27,893 acres.

| | |
|---|---|
| Farmers contacted | 347 |
| Coniferous distributed | 3,650 |
| Multiflora Rose distributed | 500 |
| Wildlife Borders recut | 1,500 lin ft. |
| Refuges maintained | 597 |
| Safety Zones established | 347 |

There are five tracts of State Game Lands in Lancaster County, located in Clay, Brecknock, Colerain, Penn and West Cocalico Townships These tracts comprise a total of 5,506 acres.

| | |
|---|---|
| Strips planted | 13 5 a. |
| Strips prepared | 13 5 a. |
| Cover Crops seeded on strips | 18 5 a. |
| Strips mowed | 13 a. |
| Strips limed | 10 a. |
| Strips fertilized | 12 a. |
| Woodland border cut | 15,380 lin ft. |
| Woodland border recut | 4,800 lin ft. |
| Trees released | 600 |

USING AN INSTRUMENT much like a surveyor's transit, Martin Muth, Work Unit Conservationist, checks the grade on a field to check the feasibility of constructing a water drainage along a road. The drainage tereace, when completed will keep runoff water from the road from spreading out across cropland.

L. F. Photo.

## ● Soil Conservation

(Continued from Page 1)

Some of the early methods of conservation were impractical on a working farm, but the basic ideas were sound, and the principals are still pretty much the same — keep the soil in place and use every acre to the maximum of its potential.

After coordinating the day's work with the other three men in the Lancaster Work Unit in the Lancaster office, Muth took me to the farm of Robert Brubaker at Belleaire, North of Elizabethtown, to show me some preliminary work on a conservation plan.

Brubaker, who now farms at Mount Joy R1, recently purchased the farm and plans to move onto it in April. He first contacted the Lancaster County Soil Conservation District Didectors and signed an agreement for a free conservation plan for the farm.

Muth had been on the farm and had made some preliminary plans for controlling the water, but now had to check further to find if the soil surface sloped in the direction he wanted to move excess surface water His 28 years in the work has taught him that the eye is not reliable when it comes to judging the exact slope of a field.

Before we got out of the car, Muth went over the county soil survey map with Larry Corson, soil conservationist who works out of the Lancaster office. They studied the soil types on the farm carefully since the type of subsoil as well as the topsoil will determine what practices will work or won't work This part of the work is easier since a complete soil survey was completed just a few years ago

Muth also had an aerial photograph of the farm with the soil capabilities plotted in color — green for the soil that could be cultivated intensively with very little danger of erosion, yellow for the soil that could be farmed with a minimum of erosion, red on the steep slopes where extreme care must be taken to prevent the cropland and ran down to the soil, washing down the streams.

In the field where we began outlining the practices, water from a roadway spilled over on a low area where it did not

(continued on page 7)

## ● Pennbell 69

(continued from page 12)

preferred such as from a hay drier or other fan-type heater, operate the heater at night when normal humidity is higher. If using forced, un heated air, it is best to run the fan during the afternoon and evening when the humidity is the lowest. Either the forced air or the heater method can be started as soon as one section of the shed is filled with tobacco.

Many of these suggestions are applicable to other varieties of cigar-filler tobacco as well as Pennbel 69. However, to those growers who are planning to grow the new variety, we recommend they follow these recommendations.

## Creeks, River Stocked With Trout And Bass

As a cooperating agency of the Lancaster County Soil Conservation District, the Pennsylvania Fish Commission last year accomplished the following activities:

Stocked 18 trout streams in

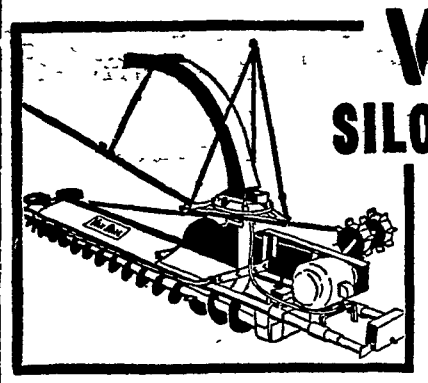
Complete automatic feeding for DAIRY COWS and CATTLE!

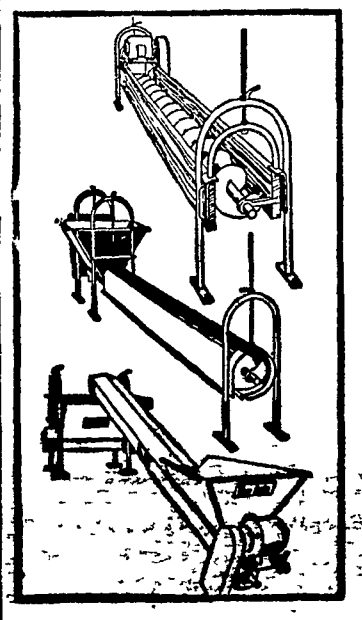
VanDale SILO UNLOADERS



Double augers deliver more silage per minute even when silage is deeply frozen . . . and at a fewer operating cost. Patented V-paddle impellers *throw* . . . not blow . . . silage down chute. Adjustable drive hubs give positive traction in all types of silage.

Three-point suspension keeps unloader level at all times.

Plus a complete line of bunk feeders to meet your exact needs



Straight-out Auger Feeder

With VanDale units you can custom build the bunk feeding set-up to fit your needs. Drive section includes hopper, drive assembly and 10', high capacity 9" auger. Additional auger sections are in 10' units and are easily coupled.

Feed-R-Flo Bunk Feeder

The new, all-metal complete feeder. High capacity 9" auger rotates within tube. Gives all-weather protection, even feed distribution, and lower operating cost.

Conveyor Trough

An important link in automatic feeding. Positioned below silo chute, the VanDale conveyor trough carries the silage to the bunk feeder. Primary section includes hopper, drive assembly, and 10', 9" auger. Additional 10' auger sections may be added.

See us for modern automatic feeding equipment

CALEB M. WENGER

HERE IS WHAT MUTH SAW. Larry Corson, Soil Conservationist, holds a surveyor's rod on ground level so that Mart can check the per cent of slope. As Corson walks downgrade, Muth reads higher and higher numbers on the rod since the transit is set to see only on a level plane. L. F. Photo.

PART OF THE JOB of the conservationist is studying maps of the farm and the soil types to be handled. Here Martin Muth, right, and Robert Brubaker of Mount Joy R1, look over the aerial photograph of the farm Brubaker recently purchased at Bellaire in Northern Lancaster County. Muth plans and lays out conservation practices on the map before any actual work on the farm is begun. L. F. Photo.

## Soil Conservation

(Continued from Page 6)

drain away readily during periods of heavy rain.

Muth used a surveyor's transit to check the slope of the field along the road. He found enough slope all the way, and planned to build a waterway along the road to carry excess runoff down to the creek That would take care of the water that fell on the land above the road, but what of the rain that fell on the low spot during heavy downpours The soil was not porus enough for the water to percolate down through the subsoil. Something else had to be considered Muth suggested to the farmer that he lay out contour strips in 50 foot lands with a very gentle slope toward the natural outlet from the field Through several years of plowing, Brubaker could plow gentle ridges in the field that would act as natural drainage ways for the excess water. The use of tile drainage under the field was considered, but it was agreed that they probably were not necessary. Muth does not believe in applying more severe measures than necessary to correct conditions.

On many fields the problem is preventing runoff rainwater, but here the problem was the opposite. This was another example of making every acre produce up to its potential.

With snow on the ground it was impossible to lay out accurate waterways or contours, but Muth found out his preliminary plan could be worked

CONSERVATIONISTS AND FARMER talk over the problem of disposing of the water that collects on the roadway and runs down across the cropland. The work of the conservationist includes explaining the idea behind proposed plans and securing the cooperation of the highways department and other interested parties. Martin Muth, Work Unit Conservationist in Lancaster, left, talks the problem over with Robert Brubaker, the land owner, center, and Larry Corson, a soil conservationist on the staff. L. F. Photo.

WITH AN INCREMENT BORER, Martin Muth, right, checks the rate of growth in the woodlot as landowner, Robert Brubaker, looks on. Muth does not recommend how to cut timber from the woodland, but he can determine if the trees are making satisfactory growth, and recommend other possible uses for land now in woods. L. F. Photo.

He would come back later to do the final checking and laying out strips according to the map he could now lay out in the office.

Before the final plan is completed, every acre on the farm will be checked to see if the best use is being made of it. Woodland might be cleared t omake contour strips more practical in some spots, trees might be planted on others where cropland would be hard to hold in place, but all this might take several years to accomplish. Conservation of the soil is a continuing process, Muth believes

Muth has his own farm at Lititz under conservation practices and knows first-hand the value of keeping the soil where it belongs.

He checked the farm boundaries on a map with Brubaker and went over the results of soil tests and we drove back to Lancaster. I had missed my morning coffee, but I had thoroughly enjoyed the ride

Soil Conservation, too, is agriculture, I thought

FLORIN, PENNA.

**Why Crops Need Limestone**

Two important ingredients needed by crops are calcium and magnesium. Both are regularly lost through the soil by the following ways:

(1) By leaching, which is a slow leaking away, a normal process where there is rainfall.

(2) By crop removals, Legumes, such as hay and other greens, are taken off the fields, instead of plowed under.

(3) By general use of the soil.

Because of this loss, the soil becomes what is known as high in acid. Putting on limestone may supply calcium and magnesium and correct the soil acidity at the same time.

It has been shown in experiments by agricultural colleges and experiment stations that for every dollar spent for limestone, from $3 to $15 are returned to the farmer through increased yields.

The U.S. Government is so thoroughly convinced of the worth of applying limestone that about one-half of the cost is granted free when application is made for it. This is to encourage farmers to be certain to use limestone.

It does pay to use limestone!

Givler, Ronks R1, secretary, and Elmer Good, Lititz R1. Not present for the picture was County Commissioner member, Richard Witmer. L. F. Photo.

# Co. Soil Conservation District Directors List 1962 Activities

Activities of the Lancaster County Soil Conservation District were varied and numerous during 1962 The following list of activities was prepared by Henry E Givler, secretary of the district

1. The outstanding Conservation Farmer was Abram Zeiset, New Holland R1.

2. A total of 257 attended the Annual Banquet at Quarryville

3. During May Soil Stewardship was observed Seven papers carried Stewardship articles, and several of the rural Churches used Soil Stewardship materials.

4. A tour of County Farms was held for the County Commissioners

5. Director and Chairman Amos Funk served as State Vice President

6. Director and Chairman Amos Funk has been elected President of the State Association for the coming year

7. The 3rd Annual Plowing Contest was sponsored by the District on the Roy Garber farm. There were 10 contestants and approximately 250 spectators J. Everett Kreider, Quarryville R D No 1 was the County winner and was sponsored by the district in the State Contest

8. The District also started a rotating Plowman trophy (which must be won three times for permanent possession)

9 The 3rd Annual Field Day was held on the farm of Gerald Darlington, Lititz R D No. 2.

10 Four Watershed Meetings were held at Bainbridges Farmersville, Paradise, and Manheim

11 A district representative attended meetings and participated in the programs of the Lancaster County Agriculture Council.

12 The district continues to help sponsor the Silt Sampling Station on the Conestoga Creek.

13 District sponsored seven Television programs

14 The district provided a plaque to the F F A boy who won the Land Use and Management Contest in the County.

15. Sponsored a workshop for Associate Directors in planning the Watershed meetings.

16 The directors purchased the new Conservation film "Beyond Tomorrow".

17 The film has been shown at four Service Organizations, three Sportsman Clubs, three Farm Organizations, ten Vocational Agriculture Departments in Lancaster County, nine Vocational Agriculture Departments in York County and one Jr and Sr High School Assembly Program.

18. Farmer Cooperators in the County now total 2105.

19. There were 92 new Cooperators signed during the year with acreage totaling 7,916 acres

20 Held 12 regular monthly meetings Directors attendance was 81 6%

## ● Creeks, Rivers

(Continued from Page 6)

Lancaster County with 13,650 brown trout, 6,720 rainbow trout, 8,220 brook trout for a total of 28,590 legal sized trout, distributed approximately 25,000 fingerling trout to sportsmen's clubs and also stocked through out the county; stocked the Susquehanna River in the vicinity of Columbia with 2000 muskellunge; investigations made in regards to channel changes, also pollution cases in conjunction with the Health dept; cooperated with farm pond owners and issued permits for chemical treatment of ponds for algae and weed control Surveys made on the Susquehanna River.

Local officer of the fish commission is Robert M. Betts, 69 Linda Ave., Lancaster.

# Tomorrow's Poultry Profits

START WITH

# Eby's Chick-to-Egg Feeding Program

Start Your Chicks on EBY'S PRE-CHICK STARTER

Start your chicks by feeding ½ lb. of Eby's Pre-Chick Starter per chick, for a fast start and less mortality.

The extra food power; higher protein; high vitamin and antibiotics fortification will save extra chicks to start on the right road to tomorrow's egg profits.

# Co. ASCS Office Cooperates On Many Approved Practices

Fred Seldomridge, County Chairman

A total of 548 farmers were enrolled and completed practices under the 1962 Agricultural Conservation Program. Practices were completed and cost-share paid as follows:

| Practice | No. of Farms | Units | Amount |
|---|---|---|---|
| Liming grassland | 411 | 7036 acres | $36,599.01 |
| Establishing permanent cover | 140 | 1438 acres | 16,904.78 |
| Improving Established cover | 110 | 2019 acres | 18,206.89 |
| Establishing permanent cover to protect diversion terraces, ditch banks, etc. | 2 | 1¼ acres | 51 52 |
| Establishing winter cover crops | 205 | 3497 acres | 5,107 39 |
| Contour stripcropping and Hedgerow removal | 62 | 1162 acres | 6,923 59 |
| Field Stripcropping | 1 | 15 acres | 30.00 |
| Clearing & leveing pastureland | 9 | 76 acres | 1,006.60 |
| Developing Springs | 2 | 2 | 173.71 |
| Constructing Farm Ponds | 2 | 2 | 595 20 |
| Establishing Sod Waterway | 5 | 3265 feet | 492 00 |
| Constructing Terrace | 1 | 2433 feet | 135 00 |
| Constructing Diversion Terrace | 5 | 2780 feet | 601 04 |
| Constructing Open Drainage Systems | 1 | 500 feet | 84 75 |
| Installing Tile Underdrain | 14 | 17,073 feet | 2,620 44 |
| Planting Forest Trees | 1 | 10 acres | 200.00 |
| Improving Stand of Trees | 1 | 2 acres | 5.32 |
| | | | $89,737.24 |

**PRICE SUPPORT PAYMENTS**

WHEAT — 61 farmers stored 39,912 bushel and received $82,053 through warehouse loans 3 farmers stored 1,064 bushel and received $2307 through farm-stored loans.

CORN — 2 farmers stored 4,771 bushel and received $6,393.

**CONSERVATION RESERVE PROGRAM**

There are 49 Conservation Reserve contracts in effect, covering 1894 acres, for which farmers received payments totalling $38,323.

**WOOL INCENTIVE PAYMENTS**

Payments were made as follows for wool and unshorn lambs sold during the 1961 marketing year:

133 producers received $5,311 83 for shorn wool.

58 producers received $832 17 for unshorn lambs.

**WHEAT ALLOTMENTS AND MARKETING QUOTAS**

6146 Wheat allotments were established in 1962, and wheat cards were issued to all eligible producers. 60 farmers applied for Feed Wheat Exemption.

**1962 FEED GRAIN PROGRAM**

CORN — 417 producers diverted 5187 acres and received $253,531.

BARLEY — 27 producers diverted 229 acres and received $5,333.

**WHEAT STABILIZATION PROGRAM**

227 producers diverted 1137 acres and received $45,645.

**DISASTER PROGRAMS — APPROVED BECAUSE OF DROUGHT**

10 farmers recovered permission to harvest hay or pasture acreage diverted under Wheat Stabilization, Feed Grain or Conservation Reserve Programs.

50 certificates were issued to farmers or dealers for 25% freight reduction on hay shipped into county.

As of December 31, 1962, 27 farmers had received approval to purchase corn under the Emergency Livestock Feed Program, at 75% of support price This program is to help farmers preserve and maintain foundation herds of eligible livestock.

## ● Game Protectors

(Continued from Page 5)

Evergreens topped or released 240

Roads maintained to food plots 15 5 miles

Bridges constructed on roads 1

Game protectors in Lancaster County are S. C Mace, Land Manager, Box 117, Mt Gretna, J. P. Eicholtz, District Game Protector, 25 Miller St., Strasburg, Pa; W. E Woodring, District Game Protector, 40 Lime St, Ephrata, Pa and Charles J. Williams, newly appointed to the county.

# Forester Makes Annual Report

The Foresters of the Valley Forge Forest District have experienced an active year in all phases of forestry except tree planting The greatest increase in work was with the 28 fires which burned an area of 217 acres. The cost of extinguishing these fires totalled $2,607.00 Many of the fires were caused by carelessness of people burning leaves and brush.

Between the time of fighting fires and reporting them, we serviced 42 requests from the people of the county. Two hundred and sixty-nine thousand board feet of timber were marked with a value of approximately $6,000 00 returned to the farmers Many acres are still being cut each year without any thought of the future. There were only 7,000 trees shipped to Lancaster County from the State Nurseries which produces nearly 20 million trees per year.

Other projects worked on during the year were. Plantation improvement; Management information to farmers and Educational programs including Career conferences The improvement of woodland to produce better timber is our most important project but is not carried out by many people Only three this past year. With the increased value of land in our county, the farmer will need to make his woodland pay by raising better trees.

The District Forester, Mr. W P. Moll, has offices in Port Kennedy, Montgomery County and John H Kitch, your Service Forester, R. D 1, Reinholds, Lancaster County are both ready to help you in any woodland problems and encourage everyone to PREVENT FOREST FIRES!

# Highway Dept. Sprays, Plants On Roadbanks

The following are the accomplishments of the Highways Department in cooperation with the Lancaster County Soil Conservation District.

**Contract Seeding and Mulching:** A total of 74,922 square yards (15.48 acres) of seeding and mulching cut and fill slopes was done by contract along 3 97 miles of new road construction. The routes involved were L R 36008-5, 36091-1, 36010-1, 36067-2 and 36013-6

**Revitalization:** The grass on cut and fill slopes as well as on median and interchange islands was revitalized along L. R A-83, 128, 129, 280 107 and 36006 in the vicinity of Lancaster Marietta and Columbia Materials used included 4.2 tons of 8-16-16 fertilizer, 350 lbs of grass seed and 42 lbs of Crown Vetch seed

**Chemical Spraying:** A total of 286 gallons of Herbicide (2, 4,D & 2,4,5-T) and 585 lbs. of Karmex (Soil Sterilant) was applied along 347 miles of State Highways. Vegetation sprayed with a 1,000 gallon rig included brush, poison ivy and noxious weeds. The herbicide was applied at the rate of one gallon to 100 gallons of water, and the soil sterilant was used at the rate of 10 lbs. to 100 gallons of water.

A grand total of 2,000,000 linear feet of Roadside treatment of all types was accomplished during 1962 in Lancaster County It is anticipated that this amount will increase to about 2,100 000 linear feet in 1963.

H. P. Kaufman is County Roadside Engineer.

Boost total farm profit... PICK FROM THE BIG FAMILY

P-A-G HYBRIDS

As your P-A-G dealer, I will gladly show you how P-A-G's *big family* approach gives you a wider choice of hybrids . . . lets you build a team of hybrids that can boost your total income from corn. I'll also explain how a P-A-G corn program works to boost all-around efficiency, no matter if you grow corn for cash or for livestock.

P-A-G ALFALFA

I've got all the information you need on P-A-G's famous FD-100, Ranger, Vernal, Buffalo and California Common, and I'll be glad to help you pick the ones that best fit your requirements. Sow these seeds with assurance. They have been tested and approved by P-A-G.

# Pennbel 69 Tobacco Deserves Better Trial

Pennbel 69, the new hybrid tobacco tried extensively in Lancaster County for the first time last year deserves a more thorough testing before it is discarded by growers, County Agent M M Smith said this week He consulted with Henry B Engle, Agronomist with the U S Department of Agriculture stationed at the Pennsylvania Research farm near Landisville, and came up with the following observations

Some growers in Lancaster County have reported green areas on some of the leaves of the new hybrid tobacco, Pennbel 69 These areas appear to be on the lower to middle leaves and on the lower half of the affected leaf

Since 1962 was the first season in which Pennbel 69 was widely grown in the county, the Research workers at the Laboratory are concerned regarding this problem With the purpose of trying to determine the cause of this green discoloration, a survey was made early in February with the help of the County Extension Service a number of growers were questioned regarding the growing and handling of their crop We feel there are several items that should be taken into consideration before this new variety, with considerable merit is discarded

1 The weather conditions during the 1962 growing season were very abnormal the drouth hit when the plants were partly grown and then showed little growth until the heavy rains of early August set off a very rapid growth cycle

2 After the moisture came the growth and ripening of the upper leaves were normal however, the lower leaves that had been severel checked by dry weather may have begun by re-absorb nitrated and unable to carry out the normal process of converting nitrates to organic compounds

3 Many of the affected leaves show that aphids were present, this may have helped to upset the nitritional balance

4 Other varieties than Pennbel showed green areas on lower to middle leaves

5 Many crops of Pennbel 69 that were planted and harvested early were of top quality and were bought at a premium. The ripening season for late-planted crops was cut short by cold weather and these lower leaves with their unassimilated nitrates did not have time to mature

6 In the nine years of testing of Pennbel both at the Research Laboratory and on farms in different parts of the county, no previous greening has occurred

7 In recent years local men from the tobacco trade had an opportunity to evaluate Pennbel 69 tobacco these hands of tobacco were grown on a number of county farms as well as at the Research Farm These men consistently placed Pennbel at the top in over-all quality Cigar tests made from these crops have uniformly placed the Pennbel tobacco on a par with, or above the standard varieties for smoking quality

In view of the above conditions concerning this new tobacco variety the Extension Agents in Lancaster County are also concerned as to the facts behind the current problem relating to Pennbel 69 tobacco We would like to point out that this new variety has yielded good weight per acre and in addition, is resistant to both Wildfire and Mosiac diseases — these are big advantages not to be overlooked

Therefore in consultation with Mr Henry B Engle and Mr John Yocum at the Field Research Laboratory we would like to make the following suggestions to Lancaster County tobacco growers

1 Do not discard this new variety until we are sure that it is unworthy of any acreage in the county

2 Do not plant Pennbel 69 later than June 20th in order to allow for proper maturity

3 Do not crowd too many plants per acre, the usual number of about 6 600 plants per acre is recommended

4 When topping the crop leave no more than 16 leaves

5 If aphids appear, spray with Malathion or Parathion.

6 After hanging in the shed, use either forced air or supplemental heat to hasten the curing process Heat would be

(Continued on Page 6)

# MARCH IS EGG MONTH

- Did you do all you could to help promote your industry in the past year?
- Do you talk EGGS to consumers?
- Do you explain their many nutritional advantages?
- Do you set the example when you take your family out for a meal and order eggs in some form?
- Do you have the feeding program which gives the best return per dollar spent?

If you are in doubt about this last item, talk to our Nutrition Department or one of our Poultry Specialists.

ELECTED AT A MEETING MONDAY night were the above officers of the Red Rose Dairy Herd Improvement Association. They are Jason Weaver, Quarryville R2, president; Kenneth Skiles, Narvon R2, vice president; Samuel Dum, 2191 Greystone Road, East Petersburg, secretary, and Jacob Houser, Lampeter, treasurer. L. F. Photo.

# DHIA Board Reorganizes; Reelects Jason Weaver

Jason Weaver, Quarryville R2, was reelected president of the Red Rose Dairy Herd Improvement Association at the group's annual reorganization Monday night

Kenneth Skiles, Narvon R2, was elected to replace Robert Hess, Strasburg R1, as vice president, and Samuel Dum, 2191 Greystone Road, East Petersburg, replaces John Shelly, Manheim R1, as secretary.

The board of directors reappointed Jacob Houser, Lampeter, as treasurer for another year.

In other action, directors voted to fix a charge of $4 50 for any commercial wishing to receive the monthly newsletters and the annual report of the association. The price for the annual report alone would be $1 50

Robert Hess, the county's delegate to the state association of DHIA directors, reported that the state will not push any form of testing other than the one now in effect, but will cooperate with any local organization which wished to include one of the other types of testing. He reported that approximately $500.00 worth of equipment per tester would be required for making protein tests, and approximately $150 worth of equipment per tester would be needed for the solids-not-fat test He emphasized that the needed equipment is so delicate that is could not be hauled from place to place in an automobile.

The directors voted to instruct the head tester, Jay Risser, to have the supervisors poll their dairymen to find out how much interest there is in total nutrient testing of milk. If sufficient interest is shown, the board will then inquire about costs and attempt to set up a program for those interested.

A five dollar charge, in addition to the regular fees, will be charged for each milking over two per day. The ruling came about as a result of two dairymen in the county who have three cows on three times a day milking which causes the tester to make as many as four trips to the farm during the month.

An additional fee of $4 per herd will be charged for the use of the milk-o-meter in milking parlors This cost was to cover the time and milage spent in transporting and washing the meters. This will be in addition to the 5 cents per cow now paid to the association for the use of the meters

The directors informed the testers that no herds should be "averaged" unless in extreme cases of emergency and then only with the approval of the extension service and the farmer. If the tester can not collect samples from the herd during the centering period, the directors said he should secure a qualified replacement to take samples for him.

The meeting was held in the Lancaster County Farm Bureau Cooperative building, Dillerville Pike.

THIS FEED TAG

HORNCO H. P. MIX CONTAINING TERRAMYCIN

can make you money in the

$100,000 TERRAMYCIN* EGG MONEY CONTEST

TWO WAYS TO WIN:

● MATCH YOUR NUMBER on your HORNCO dealers Terramycin Egg Money Master Board. Coupons and full contest rules are in Everybody's Poultry Magazine, February issue and Farm Journal, March issue.

● MAIL YOUR COUPON AND FEED TAG to enter the $10,000 Sweepstakes

11,312 SEPARATE PRIZES

1ST PRIZE . . . . . $5,000
10 2ND PRIZES . . . . . $1,000 EACH
100 3RD PRIZES . . . . . $100 EACH
200 4TH PRIZES . . . . . $50 EACH
11,000 5TH PRIZES . . . . . $5 EACH
PLUS
$10,000 SWEEPSTAKES PRIZE

You may have already won in the Terramycin Egg Money Contest. If your number (available in leading farm magazines) matches any of the numbers on your HORNCO dealer's Egg Money Master Board you're in the money . . . from $5 to $5,000.

And even if you don't have a matched number, you're eligible to win the $10,000 Sweepstakes Prize. Just send in your coupon along with a tag from HORNCO H.P. Mix laying feed containing Terramycin and you're entered for the big Sweepstakes drawing.

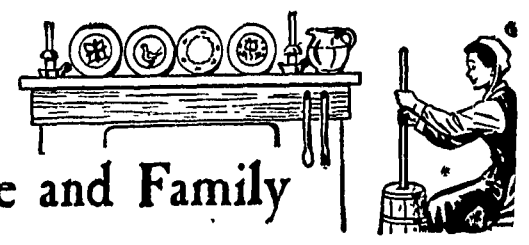
# SCD Banquet Is Next Week

A new color movie called "Beyond Tomorrow", produced by the Pennsylvania Soil Conservation Service, will be shown at the annual meeting and banquet of the Lancaster County Soil Conservation District next Wednesday night.

Main speaker at the banquet, scheduled to begin at 6.30 p.m. in Hostetter's banquet hall in Mount Joy, will be Jack Owen, Editor of Lancaster Farming.

Awards for outstanding cooperation with the district will be presented by Richard Witmer, County Commissioner, member of the district. Henry Givler, secretary of the district, will present the annual report, and special guests will be presented by the toastmaster, Amos Funk, chairman of the district directors.

Garland Gingerich, teacher of vocational agriculture at Penn Manor High School, is banquet program chairman.



# For the Farm Wife and Family

## *Prunes For Pep*

By Mrs. Richard C. Spence

Prunes are a valuable asset to good nutrition. This well-known fruit almost as old in history as man, is as modern as all the new nutritional knowledge of this age.

**LEMON HARD SAUCE**

- ⅔ cup butter or margarine
- 2 cups confectioners sugar
- 1½ teaspoons grated lemon rind
- 1 tablespoon lemon juice

Cream butter or margarine; add sugar, lemon rind and juice. Cream until fluffy.

**SPICY PRUNE TAPIOCA**

- 1 pound prunes
- 3 cups water
- 1 teaspoon ground cloves
- 2 teaspoons cinnamon
- 2 eggs separated
- 3 cups milk
- ½ cup sugar
- 4 tablespoons granulated tapioca
- ¼ teaspoon salt
- 1 teaspoon vanilla extract
- ½ cup heavy cream, whipped

Combine prunes water, cloves and cinnamon, bring to boiling point. Cover and simmer 10 to 20 minutes, cool. Drain and remove pits. Chill. Mix egg yolks in saucepan with a little of the milk, add remaining milk ¼ cup sugar, tapioca and salt. Cook over medium heat until mixture comes to a full rolling boil, stirring constantly. Beat egg whites until stiff, gradually add remaining ¼ cup sugar beating constantly, until mixture stands in peaks. Gradually fold hot tapioca mixture into egg whites, blending thoroughly. Add vanilla extract. Cool stirring once after 15 minutes. Chill. When ready to serve, fold in whipped cream. Place alternate spoonfuls of spiced prunes and tapioca cream into parfait glasses. Top with prunes. Makes 8-10 servings.

**BAKED PRUNE-APPLE WHIP**

- 1 cup plumped finely chopped prunes
- 1 cup canned apple sauce
- 2 teaspoons grated lemon rind
- 1 tablespoon lemon juice
- Dash salt
- ½ teaspoon mace
- 4 egg whites
- ¼ teaspoon cream of tartar
- ½ cup sugar

Combine prunes, apple sauce, lemon rind and juice, salt and mace. Beat egg whites until foamy; add cream of tartar and beat until stiff. Gradually add sugar, beating constantly until stiff. Fold in fruit mixture. Pour into 2 quart casserole. Bake in moderate oven, 350 degrees, 20 to 30 minutes, or until set. If desired, serve warm or cold with custard sauce.

**PRUNE COFFEE KUCHEN**

- ¼ cup shortening
- ¾ cup sugar
- 1 egg
- 1½ cups sifted all-purpose flour
- 2 teaspoons baking powder
- ½ teaspoon salt
- ½ cup milk
- 1 cup plumped pitted chopped prunes
- ½ cup light brown sugar
- 1 teaspoon cinnamon
- ¼ cup butter or margarine
- Prune halves for garnish

Cream together shortening and sugar until smooth. Add egg; mix well. Sift together flour, baking powder and salt, add alternately with milk to creamed mixture. Stir in prunes. Pour into well greased 9 x 9 x 2-inch pan. Combine brown sugar and cinnamon, sprinkle over batter, dot with butter or margarine. Bake in a moderate oven, 375 degrees, 50 to 55 minutes. Garnish with prune halves.

**PRUNE CRANBERRY MOLD**

- 1 package lemon-flavored gelatin
- 1 cup hot water
- 1 large orange
- 2 cups fresh cranberries
- 1 cup plumped pitted chopped prunes
- ½ cup chopped celery
- ½ cup sugar
- ¼ cup slivered toasted almonds
- Chicory or lettuce
- 1 8-ounce package cream cheese, cubed
- Slivered toasted almonds

Dissolve gelatin in hot water; cool; peel orange; put orange rind and cranberries through food grinder using medium blade. Section orange; combine with rind, cranberries, prunes, celery, sugar and almonds. Add cooled gelatin. Pour into 1 quart mold; chill until set. Unmold on greens. Garnish with cream cheese cubes topped with slivered almonds. If desired, serve with mayonnaise or salad dressing. Makes 6-8 servings.

**PIQUANTE TOPPING FOR WAFFLES**

- 2 cups plumped pitted prunes
- ½ cup dark brown sugar
- 1 teaspoon cinnamon
- 1 teaspoon nutmeg
- 2 tablespoons lemon juice
- 2¼ cups pineapple chunks

Combine prunes, sugar, cinnamon, nutmeg and lemon juice; heat. Add pineapple and syrup. Heat. Just before serving top with slivered toasted almonds. Serve over waffles. Makes about 1 quart.

They are unique in the contribution they make as a natural source of food elements essential to a good diet as we know it today. They are: 1) an excellent source of Vitamin A; 2) a source of other essential vitamins; 3) high in important minerals; 4) good hemoglobin and red cell builder; 5) good source of quick energy; 6) a natural regulator; 7) a sweet that is healthful; 8) a teen-age beauty aid; 9) a pick-up snack for the overweight.

It is a simple matter to prepare today's already semi-plump and succulent prunes for either ingredient use or table service. Following are some of the methods. With any of them you can vary the flavor by adding lemon or orange slices, whole cloves, or stick cinnamon. Additional sugar is not added because nature has provided this in abundance right in the fruit itself.

1. Boiling Water Method: Cover a pound of prunes with a quart of boiling water. Cover the container and let prunes

## For The Farm Wife

(Continued from Page 14)

soak for 24 hours. Keep in the refrigerator. The longer prunes soak the plumper they get. This method gives a "light-bodied" juice.

2. Steaming Method: Place prunes in colander and set over tea kettle or pan of boiling water for 30 minutes or more until plumped. You get no syrup at all with this method

3 Soak and Cook Method: If you like a thick, syrupy juice with your prunes, soak them first (overnight preferably). Then cook by bringing the water to a quick boil, turning the flame low and simmering three to five minutes.

4. Cold Water Method: If you want plumped prunes to use in baking or cooking other dishes, put the prunes in a jar or bowl, cover with cold water-1 quart of water to a pound of prunes. Cover the container and let them soak for 24 hours. Then tuck them away in the refrigerator ready to use any time the spirit moves you.

5 Just Cook Method: Without soaking the prunes first, place them in saucepan, cover with cold water-1 quart of water, to a pound of prunes — bring to boil and simmer gently for 10 to 20 minutes. Preferably let stand overnight in their liquor before eating. The prunes will grow plumper and the juice richer

Prunes lend themselves well to breads and cakes The following Prune Honey Quick Bread is thick with fruit and nuts.

**PRUNE HONEY QUICK BREAD**

- 1 egg, beaten
- 1 teaspoon vanilla extract
- 1 teaspoon baking soda
- 1½ cups chopped prunes
- 1 cup boiling water
- ½ cup liquid honey
- 2¼ cups sifted all-purpose flour
- ⅔ cup sugar
- 1 cup chopped walnuts

Combine egg, vanilla, baking soda, prunes and boiling water. Cover, let stand 20 minutes, add honey. Sift together flour and sugar, add prune mixture and walnuts, mix well Pour into greased floured loaf pan 13 x 4 x 2 inches. Bake in slow oven, 325 degrees, 1 hour or until done Cool 10 minutes. Remove from pan. Cool thoroughly.

**JUBILEE PRUNE PIE**

- 1½ cups plumped prune halves
- 1½ cups canned apple slices
- ½ cup diced candied fruits

(Continued on Page 16)

## Ladies, Have You Heard? . . .

**By: Jane Thurston, Extension Home Economist**

THURSTON

### First Aid For Stained Linens

Treat stains promptly Sponge spilled fruit or tomato juice stains with cool water Some fruit stains, such as orange or grapefruit, are invisible when fabric dries It untreated, such stains will turn yellow upon aging or heating.

You can remove cranberry and other fresh fruit stains with boiling water if it won't damage the fabric Just hold the teakettle one to three feet above the fabric and pour water through the spot

Always remove candle drippings from table linens before washing. First take off excess wax, gently scraping the fabric with a dull-edged knife To remove rest of the wax, place stained area between clean white blotters or several layers of facial tissues and press with a warm iron Sponge any stain left with a grease solvent.

### Facts About Paint

A semigloss or a glossy alkyd paint is best suited for bathrooms, kitchens and areas where there is considerable moisture and where frequent cleaning is needed Use it on walls, trim doors, and cabinets Alkyd paints seem to have better resistance to moisture than latex paints.

A latex flat finish paint is a good choice for walls in living areas where you may need to remove smudgy fingermarks often Fingermarks are hard to remove from alkyd painted surfaces.

It's a good idea to wait at least three weeks before trying to remove smudges from a new latex-coated wall or you may damage the finish After a few days you can clean smudge marks from alkyd painted surfaces

Don't be in a hurry to paint a new plastered wall with alkyd paint Wait until the plaster has cured thoroughly . . curing takes about six months.

### A Shopping Guide

When shopping for men's cotton shirts, look for these signs of quality and long wear: even, closely spaced stitches along the cuff edges and front panel, sturdy buttonholes without ravels, back gathers or pleats over shoulder blades for better fit.

### A Food Tip

Most of the celery in Florida is produced on 15 farms and most of the green and wax beans on fewer farms than that About a hundred dairy farms produce all the milk for metropolitan Miami — more than a half million people.

### This 'an That

To spruce up plain white cotton gloves, sew a few seed pearls on the cuffs It's also an inexpensive way to give plain gloves a dressy designer look.

Children's wear this spring will feature yellows . . . the color may be called daffodils, lemon, or banana. Yellow will be seen in a wide range of cotton prints and solids.

For a quick meat of creamed eggs on toast, mix one can cream of mushroom soup with enough milk to make it the consistency of medium cream sauce Heat then slice hard-cooked eggs into soup and heat through Serve hot on toast.

You can use camp stools for luggage racks. Stools are easy to fold and store when not in use, and they're inexpensive, too.

BEST FOOD BUYS

# Lenten Foods Head Lists

The Lenten Season, which began on Wednesday of this week, promises to exert considerable influence on retail food-market activities in the weeks ahead, observes Tom Piper, Penn State Extension Marketing Agent. Being aware of the Lenten restrictions observed by some families, many retailers will develop store features around foods appropriate to the season.

All dairy products, eggs and many seafood items are in plentiful supply and subject to promotion in the weeks ahead. March will be observed by many retailers as National Egg Month, Fish and Seafood Time and Good Breakfast Month. Foodshoppers can profit from the food values offered during these special merchandising events.

Livestock markets continue well supplied at barely steady to slightly lower prices. Better buys will appear in pork roasts, chops, hams and bacon and in beef chuck and round roast with some stores promoting steaks. Poultry supplies are moderate and retail prices may vary considerably,, depending upon the promotional plans of individual stores.

Fresh fruit and vegetable supplies continue to be hampered by the consistent poor winter growing conditions that started in January. Best values in fresh vegetablee will be found in sweet potatoes, carrots, onions, mushrooms and potatoes. Endive, escarole, broccoli, and radishes are fairly good buys. Prices have dropped on Iceberg lettuce and cauliflower but quality is irregular and careful selection is recommended.

Apples and pears remain in adequate supply. These fresh fruits are supplemented by the higher priced bananas, grapes, strawberries and imported fruits. The limited volume of good quality citrus fruit is disappearing fast and wholesalers predict the season will end in early April.

# Farm Women 5 Make Donation

Society of Farm Women 5 voted a $5 donation to the migrant work fund in Lancaster County at a recent meeting in the home of Mrs Roy Hershey, 320 High Street, Manheim.

Members planned a bus trip for Thursday, April 4, to a shopping center in New Jersey. Reservations are to be made with Mrs. Abram Weidman, Manheim R1, or Mrs Paul Ebersole, 1960 Linden St., East Petersburg. Busses will leave the Manheim Auto Auction and East Petersburg Brethren Church at 7 a m.

Members of Society 5 will be entertained by members of Society 8 on Saturday, March 16 in the home of Mrs. Paul Witman, Mount Joy.

A feature of the program was a review of the book "Whom the Lord Loveth", by James Huff, given by Mrs Paul Stern.

At the next meeting on Saturday, March 30, beginning at 1:30 p.m, members of Society 22 will be guests.

# Farm Women 4 Add Member

Mrs. Dorothy Gamble, Mountville was installed as a new member by Farm Women Society 4 at a recent meeting in the P.P.&L. Company building, Columbia. Mrs. Paul Kauffman was hostess.

Members voted a contribution to the migrant fund work. Mrs. Daniel Will presided and Mrs. Frances Brooks was in charge of devotions

Roll call was answered by members recalling a humerous cooking incident during her career as a housewife.

Mrs. Mary Myers of the P.P. & L staff showed a film strip on freezing vegetables and desserts.

Keith Mummaw, a kindergarten pupil gave a recitation, and Bonnie Breniser, a sixth grade student played selections on an electric organ.

The next meeting will be held March 30 in the Landisville Lutheran Church beginning at 2:30 p.m.

Refreshments!

## For The Farm Wife

(continued from page 15)

and peels
2 teaspoons grated lemon rind
3 tablespoons lemon juice
1 cup sugar
1 teaspoon cinnamon
1 teapoon nutmeg
Dash salt
2 tablespoons flour
Pastry for 2-crust pie

Combine prunes, apple slices, candied fruits, lemon rind and juice. Stir in sugar, cinnamon, nutmeg, salt and flour; mix well. Line 9-inch pie plate with pastry; pour in fruit mixture. Cover with pastry, seal edges and flute. Cut slits in top to allow steam to escape. Bake in hot oven, 425 degrees, about 45 minutes, or until golden brown. Serve with Lemon Hard Sauce.

# Interstate Milk Producers Make Awards

District director, B. Shaney Garber, Willow Street R2, presented 25-year membership pins to 16 members of district 7 of the Interstate Milk Producers Cooperative at the local's annual meeting Monday at Bird-in-Hand.

Those receiving pins were:

Mose D. Stoltzfus, Gap R1; John A. Breneman, Willow Street R1; H. F Brubaker, 21-61 Rockvale Rd; Jacob R. Houser and son, Lampeter, Ross N. Huber, Lancaster R4.

Eugene Koser, Lancaster R4; John H. Herr, Lancaster; J Robert Neff, Lancaster R4; Elvin M. Rohrer Jr., 2529 Horseshoe Rd, Ferry V. Rohrer, Columbia R2.

James R. Graybill, Lititz R2; Noah W. Kreider and Sons, Manheim R3; Aaron M. Beiler, Lancaster R4; Samuel H Beiler, Bird-in-Hand R1; Paul N. Buckwalter, 130 Buckwalter Rd., and Lester G. Landis, 2088 Creek Hill Rd.

"The supply-management approach of Secretary of Agriculture Orville L Freeman," said general manager O. H. Hoffman Jr, the cooperative's general manager "was more responsible for our increase in milk supplies than bulk tanks."

He said that many dairymen were expanding milking herds in expectation of milk quotas that would have been imposed if the milk bill had been approved by Congress.

"This year Freeman changed his approach to a voluntary program," Hoffman said, "but he's just as much interested in getting control of your business and mine as he was last year."

The Philadelphia cooperative official asked member to push for the retention of the Pennsylvania Milk Control Law.

"Don't let anyone tell you that regulations won't work," he said. "The state milk control law is still the best state milk bill in the country."

Hoffman predicted a rather gloomy outlook this year for milk prices and urged producers to cull herds hard through the use of dairy herd improvement association testing.

He also warned of continued over expansion by dairymen, but laid halt the blame on easy credit by commercial institutions "who are inclined to be too optimistic."

Hoffman also urged District 7 members to continue to maintain a superior quality product in face of surplus because "if we can't maintain our quality to keep markets, someone else will."

In this respect, markets are currently more important than price, he said, and "we are going to concentrate on this philosophy this coming year."

Other speakers were County Agent M M. Smith, Inter-State fieldman Charles E. Cowan; Abner H. Risser, treasurer, Metropolitan Milk Producers Bargaining Agency; Mrs. Noah Kreider Jr., Melvin M. Biedle and Laban Z. Byers.

---

More of the weekly food money is spent on teen-age boys than any other member of the family, according to the United States Department of Agriculture. The estimated cost of a week's food supply (following a moderate cost plan) for one growing male, age 16 to 19, in January 1962 was $11.20.

---

Few women nowdays run around gossiping. The telephone is so much handier.
